SecureGuard

Anti-Vehicle Perimeter Barrier

TESTED to BS PAS 68:2007 and CPNI, UK Approved, SecureGuard has been designed to provide perimeter protection against the terrorist threat of vehicle borne attack.

SAFE Developed from existing highway barrier technology, SecureGuard's distinct step profile provides a CRASH FRIENDLY PERFORMANCE for 'normal' road users.

SECURE Tested to stop ramming attacks from vehicles up to 7500kg, travelling at 90° to fence line. After initial attack, SecureGuard has PROVEN to continue to provide immediate PROTECTION FROM REPEAT ATTACK.

No ballast required – less vulnerable to tampering / leakage and reduces transport & installation time

VERSATILE Providing both portable and permanent solutions, SecureGuard can be installed to many existing site surfaces or, where required, to a shallow concrete foundation – MINIMISED INSTALLATION COSTS.

Shallow foundations, minimal anchoring

DURABLE Galvanised to EN ISO 1461:1999 and an untensioned system, SecureGuard offers a service life of over 20 years corrosion free with NO MAINTENANCE.

SecureGuard

Anti-Vehicle Perimeter Barrier

SecureGuard offers three levels of protection, designed to provide simple and cost effective solutions to the many varying demands for perimeter security – SG20, SG30 and SG50.

All systems tested to BS PAS 68:2007 (7500kg truck, attack angle 90°) at speeds of 20, 30 or 50mph.

SecureGuard's unique and patented Quick-Link system allows for quick installation of both SecureGuard 20 and 30 systems – ideal for perimeter protection at events or locations where a temporary solution is required.

Additional option of wheeled units allows for rapid localised deployment without special lifting equipment.

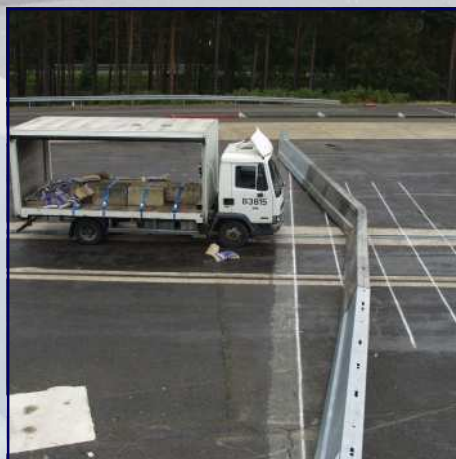

SecureGuard can be combined with any approved anti-personnel fence to provide complete perimeter protection whilst negating the need for a separate fencing system – minimising installation cost further.

SecureGuard also meets the US DoS K4 and K12 ratings.
